*Inoculums contained 10⁶ spores of each of *P. steckii*, *T. atroviride*, *P. concentricum*, *P. sumatrense*, *A. restrictus*, and two *A. versicolor* strains

FAQ's

Healthful Home 5-Minute Mold Test

What are the advantages of the Healthful Home 5-Minute Mold Test?

Other mold test kits are really nothing more than collection kits to send to a lab. Unless you send it into a lab for an additional fee those other kits cannot distinguish between problem molds and everyday types of mold. Figuring in additional fees for lab testing, other kits will cost the average user \$80 to \$100 for each location tested and they can take up two weeks for lab results. Healthful Home 5-Minute Mold Test does not require any additional fees to determine the presence of unhealthy molds and it's easy to do yourself in minutes.

Where should I test in my house?

If you are concerned about general air quality in a specific room, it is best to sample dust in that room. Typically this settled dust would be taken from a bookshelf or other flat surface in the room of concern. Alternatively, if your primary worry is an area showing possible mold growth, you should sample the area directly (a wet wall or ceiling for example). If you are concerned about both your air quality and specific suspect "moldy" areas you might consider purchasing multiple kits.

Does the Healthful Home 5-Minute Mold Test detect all types of mold?

The Alexeter Healthful Home 5-Minute Mold Test has been shown to detect only the types most associated with water-damage and health issues such as Aspergillus, Chaetomium, Penicillium and Stachybotrys species. It does not give positive results for molds naturally found in the environment in the absence of water leaks such as Alternaria and Cladosporia species.

Jacob J. ★★★★★

The kit was easy to use. Results were almost immediate. The only thing better than this product (which was excellent) was the amazing customer support.

5-Minute Mold Test

Advantages:

- No need for costly inspectors
- Like no other DIY test on the market!
- Detects over 32 unhealthy mold species... including Stachybotrys chartarum
- Easy-to-use...three quick steps: sample area, snap bulb to wet and add directly to test
- Patented technology licensed from the U.S. PHS; no waiting for lab results
- Free professional consultation with positive result

Joy M. ★★★★★

This company's product and customer service is outstanding. For us it was a much better fit than using other methods which would've required a delay in the results. This test result required about 15 minutes for us.

This is the best value in home mold testing! Before buying those "low-cost" mold kits, get the facts. Do your own testing quickly and easily while saving money as compared to those other mold kits. Why wait 48 hours for a culture dish and another 7 days and \$40 more to find out you have a mold problem? The Healthful Home 5-Minute Mold Test gives results in minutes and detects the most worrisome molds associated with water damage and illness.

Lannie R. ★★★★★

This item worked, was easy to use and gave results within minutes. I would recommend it to anyone who has any doubts about mold in their home.

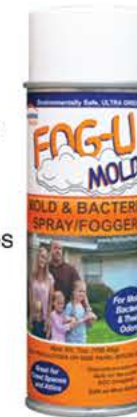

- Mold & Bacteria Disinfectant Cleaner
- Fog-U Mold Aerosol Whole Room Fogger

Advantages:

- Innovative enzymatic formula
- Independently tested and proven
- Kills in minutes
- Months of lasting protection
- Safe for use on most surfaces and materials
- Safe for your family and pets
- Restores indoor air quality
- Anti-allergen
- 100% biodegradable

The safest and most effective way to eliminate unhealthy mold and bacteria contamination. Specially formulated, state-of-the-art combination of natural ingredients, designed to provide a superior treatment alternative to harsh chemicals. Not a typical chemical formulation. Healthful Home Mold and Bacteria Disinfecting Cleaner utilizes natural enzyme action to destroy pathogens resistant to traditional chemical disinfectants. Widely used in residential and commercial properties Healthful Home Mold and Bacteria Disinfectant Cleaner eliminates the need for harsh chemicals and dangerous ingredients. Fog-U Mold delivers the same all-natural ingredients in aerosol form, to treat more widespread and difficult to reach areas.

FAQ's

Healthful Home Mold & Bacteria Cleaner Available in Spray Bottle or Fog-U Mold Aerosol

What makes Healthful Home Mold and Bacteria Cleaner different?

Healthful Home Mold and Bacteria Cleaner disinfects and cleans unhealthy microbes more effectively than other competing products and WITHOUT the use of harsh chemicals. Furthermore, HH Cleaner provides unique residual protection long after the leading competitor's products have lost their effectiveness. HH Cleaner is 100% biodegradable and has been independently laboratory tested.

Does HH Mold and Bacteria Cleaner contain any bleach or chlorine products?

No, Healthful Home Mold and Bacteria Cleaner is 100% bleach-free and chlorine-free. You can safely use our cleaner on surfaces and bleach-sensitive materials such as fabric shower curtains, aluminum and wallpaper.

How does HH Mold and Bacteria Cleaner provide longer lasting protection?

Unlike chemical-based products components that degrade once they react with germs, HH Mold and Bacteria Cleaner utilizes all-natural biological components (enzymes) that remain active after contact with microbes. These natural enzymes keep their effectiveness much longer than chemical cleaners. This "catalytic" cleaning action means the active ingredients in the HH Cleaner provides long-term disinfecting action that chemical cleaners can't.

Is HH Mold and Bacteria Cleaner safe to use on any surface?

Yes, because HH Mold and Bacteria Cleaner is free of harsh chemicals, it is safe to use on almost any surface imaginable, including walls, wallpaper, tile, porcelain, marble, wood, plastic, enamel and metals. It's also safe around kids and pets!
